

Door Handle Variations

Lever Lock (has a keyhole opening) – For use with a morticed lock and key which can be used from both sides of the door - **Lever Latch** is a standard lever handle used on doors where there is no need for any type of locking – **Bathroom (turn & release)** can be locked using a turn snib from the inside and can be unlocked from the outside in-case of an emergency – **Euro Profile (with cylinder hole)** designed to accommodate a cylinder lock rather than just the key itself. The Cylinder passes through the door handle into the lock case inside the door and back out through the door handle on the other side of the door. These use a different style of cylinder key.
